

HP Solutions for Healthcare

ENABLE PROVIDERS... EMPOWER PATIENTS

Today's healthcare industry is on the brink of a major shift: the opportunity to move from caring for sick patients on a case-by-case basis to providing holistic, proactive, and personalized long term, accountable health management. Such a dramatic change requires overcoming a number of challenges: the need to alter workflow processes, adapt to new workplace cultures, define processes for handling reimbursements, and manage organizational change. In addition—and perhaps the most technically daunting challenge of the evolving healthcare model—it requires an end-to-end digital health framework that enables clients to coordinate care across the extended healthcare ecosystem. HP offers a wide range of services and solutions specifically designed for healthcare providers. By helping you to improve workflows in areas such as admissions, at the nursing station, and in the medical records department, we can help you improve outcomes where it counts most: in delivering quality care.

HP CAPTURE AND ROUTE

With HP Capture & Route, you can automate these paper-intensive workflows. This can mean lower costs, a reduced administrative burden, and less scope for human error. And because of close collaboration with leading healthcare application providers, you can be certain HP workflow solutions integrate seamlessly with clinical healthcare systems. A good example of how this can work is in the Admissions and Medical Records departments. Using HP MFPs, you can scan documents, such as prescriptions and test results, straight to a patient's medical record at the touch of a button.

HP SECURITY MANAGER AND ACCESS CONTROL

HP JetAdvantage Security Manager can also help increase security, strengthen compliance, and reduce risk across your imaging and printing fleet. HP Security Manager uses a policy-based approach to secure devices, enabling print administrators and security officers to streamline the process of deploying and monitoring devices by applying a single security policy across the fleet. Help meet patient privacy regulations by controlling and managing access/output to MFPs and printers with authentication and authorization, plus an audit log of who is faxing, scanning, copying, and printing protected patient health

People expect more from healthcare providers than of any other type of public institution. As understandable as this is, it places hospitals under tremendous pressure. We can help!
